DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-21, drawn to a method and apparatus for permitting the externally access to the one of the N memory blocks during a certain interval and refreshing the at least portion of the current first possible refresh block during the same certain interval if the memory block of the externally generated access does not contend with the current refresh block, classified in class 711, subclass 100.
 - II. Claims 22-29, drawn to a method and apparatus for copying of the Nth block to a data buffer and permitting the external access concurrently with refreshing of the Nth Block when the external accesses are not to the Nth block or the external accesses hit the buffer, classified in class 711, subclass 106.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as operating first and second address generator, a multiplexer and an external access compare logic to permit the externally access to the one of the N memory blocks during a certain interval and to refresh the at least portion of the current first possible refresh block during the same certain interval if the memory block of the externally generated access does not contend with the current refresh block,

which is different from invention II of operating a bi-directional refresh address generator, a buffer and a control logic to copy the Nth block to a data buffer and to permit the external access concurrently with refreshing of the Nth Block when the external accesses are not to the Nth block or the external accesses hit the buffer. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
